

Abstract

The efficiency & safety of primary PCI in managing pts with acute MI is well established. Critical care department of Cairo University encompasses a well equipped catheter lab & well trained staff; readily available 24 hrs all through the 7 days of the week. Fourhanded & twenty pts presented with acute MI were managed with primary PCI, over almost 10 years with success rate 93.52% & outcome similar to that of international centers. Six months outcome of 207 pts was similar to that of international centers.

Key Word: PCI, Primary PCI, Registry, Acute MI
